FUNGICIDE:

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan
Fertilome F-STOP Lawn Fungicide				x-----x					x-----x				

New Lawns:

Follow local watering restrictions for the establishment of new turf. Fertilize after installation with Milorganite and apply supplemental feeding in 4 to 6 weeks.

Treat for insects immediately and begin appropriate insect routine described above. Weed control should not be used for 12 weeks following new grass installation.

Hints for a healthier lawn:

Mow regularly to height of 3"-4", keep mower blade sharp and clean, and irrigate in the early morning.

Apply insect control before infestation is apparent. Regular applications as indicated above will result in an easily maintained lawn.

If you have any questions, call us - - or bring a 1 foot section of your problem lawn in for analysis.
